## Professional Summary

---

Data-driven, detail-orientated, and insightful Site Reliability Engineer with proficiency in software development, cloud infrastructure, automation, container orchestration and AI. Leverages agentic tooling as a force multiplier to increase deliverables and focus on higher-level abstractions. Utilizes programming, CI/CD, and infrastructure as code to build highly-available services. Measures service KPIs with rich telemetry and monitoring. Exhibits leadership and collaboration skills through project design, implementation, deployment, and integration. Drives company-wide initiatives that provide value to multiple teams and customers.

## Technical Skills

---

|                             |                                                                                 |
|-----------------------------|---------------------------------------------------------------------------------|
| AI                          | Context Engineering, Claude, Cursor, ChatGPT, Agentic SDLC, Agent Orchestration |
| CI/CD                       | Github Actions, Gitlab, Argo, Flux                                              |
| Cloud Providers             | AWS, GCP, DigitalOcean                                                          |
| Configuration Management    | Ansible, Helm                                                                   |
| Containers/Orchestration    | Docker, Kubernetes, VMWare                                                      |
| Infrastructure Provisioning | Terraform, Pulumi                                                               |
| Markup Languages            | HTML, LaTeX, Markdown                                                           |
| Monitoring                  | Grafana, Elasticsearch, DataDog, InfluxDB, Prometheus, SNMP, Splunk, Syslog     |
| Programming Languages       | Bash, Golang, Java, Javascript/Typescript, Python, Zig                          |
| Web Frontend                | Nginx, NodeJS, Svelte, TailwindCSS, VueJS                                       |
| Web Backend                 | Flask, FastAPI, GraphQL, NodeJS                                                 |

## Professional Experience

---

Angi | Engineering Manager Feb 2025 - Present

- **AI** – Orchestrate agents to boost productivity and multiply impact across platform and product domains
- **Technical Leadership** – Lead and mentor the Observability platform team
- **Coaching** – Foster a positive work environment where team members can grow and tackle new challenges
- **Ownership** – Take ownership of the entire Observability stack that is growing and evolving to ensure quality
- **Data-driven** – Deliver a product that provides users with critical service visibility

Angi | Senior Infrastructure Engineer Jul 2022 - Feb 2025

- **Automate** – Design, develop, test, and deploy automation to reduce human labor
- **Mentoring** – Mentor junior team members on technology, development workflows, and mindset
- **DevOps** – Develop and manage systems frameworks to deliver highly-available services
- **Observability** – Design, implement, and improve telemetry/analysis services

## Warner Bros. Discovery | Staff Site Reliability Engineer

Apr 2022 - Jul 2022

- **DevOps** – Develop and manage systems frameworks to deliver highly-available services
- **Cloud** – Deployed hybrid CI/CD runner into Kubernetes clusters for workloads
- **Security** – Developed, released, and deployed security updates to Kubernetes clusters
- **Hire and Develop the Best** – Mentor junior team members on technology, development workflows, and mindset

## iStreamPlanet | Senior Site Reliability Engineer

Jul 2020 - Apr 2022

- **Cross-team Ownership** – Created centralized container artifact repo to manage AWS Elastic Container Registry repositories
- **Agile** – Migrated pipelines from CodeFresh Container Registry (deprecated) to AWS ECR
- **Full Stack Development** – Designed, developed, deployed and integrated a network API service that serves as the single source of truth for network device information
- **Cloud** – Migrated DataDog agent deployment from AWS EC2 instances to a modern Kubernetes deployment (AWS EKS)
- **Bottom Line** – Reduced DataDog costs by a factor of 3x, by optimizing vertical node scaling in Kubernetes clusters and worked with teams to address high cardinality metrics
- **Infrastructure as a Service** – Built highly available, geographically redundant infrastructure services in the cloud (DNS, Syslog, NTP)

## iStreamPlanet | Network Engineer

Oct 2019 - Jul 2020

- **Network as a Service** – Refactored network device management process to deploy through CI/CD
- **DevOps** – Built custom terraform provider plugin to scale monitoring tests programmatically
- **Innovation** – Migrated Solarwinds monitoring to DataDog SNMP polling and ThousandEyes path monitoring
- **Security** – Built reusable python script to patch network device security vulnerabilities

## NBCUniversal | Senior Engineer, Network Automation

May 2018 - Oct 2019

- **High Availability** – Proactively ensure reliability and availability for NBCU's global applications
- **Data Analysis** – Provide data analysis and metrics for LRP
- **Security** – Automated configuration compliance and remediation on a global scale
- **Full Stack Development** – Built in-house tooling for network inventory analysis, reporting, and configuration backup
- **Monitoring** – Integrated internal APIs for monitoring dashboards

# Education

---

California State San Bernardino

Bachelor of Arts in Mathematics
